

**COROTHERM INDUCTORS**

Backlack inductors are made from a special coil (thermoplastic coil). An additional layer of varnish is melted on the wire during or after the coiling procedure using hot air or a current impulse. This effect is comparable to impregnation under vacuum. This coiling technique achieves a vibration free inductor coiling.

Copper Wire Ø: 1.32 mm  
 Copper Wire: with thermoplastic insulation  
 CU Purity: > 99.99 %  
 Wire Bonding Length: 40 mm  
 Tin Coated Length:: min. 10 mm  
 Coil Body Material: Polycarbonate  
 Core Type: COROBAR Core with drill-hole  
 L-tolerance: ± 5 %  
 L-Value: Nom. 25° Cand 1 kHz
