

Royal Silver Coil

Product Description

Our silver coils are made from pure silver foil, Ag 99.97%.

A polypropylene film separates the windings.

Coils are wound on a hard-wood core.

Available in 16 AWG (1,33 mm²)

Because of the very tight windings, we have achieved an extremely low magneto shrinking factor and virtually zero FM distortion.

Jantzen Silver Coil is even closer to the "ideal inductor" compared to our famous Cross Coil made from copper foil.

We guarantee the tolerance +/-1 %.

This product is designed for the very best high-end loudspeaker systems.

Jantzen Silver Foil Coil 16 gauge sustains 350 watts RMS.

For special requests we can also offer Royal Silver Coil, wound on Teflon film.
